

Studies regarding gas-fired power plant refurbishment

(Presentation begins approximately at minute 53 in the video ... see link below)

The consultant considered over 100 possible cases. They filtered out scenarios based on reliability and technical feasibility. They ended up running 12 scenarios with different amounts of Natural Gas repower, renewables, battery storage and transmission lines. Their recommendations were presented at the [Nov 27 LADWP Board Mtg](#) (OTC presentations start ~53 min into the recording).
