The Project
The new parallel sewer system will operate in conjunction with the existing 48-inch force main. With the systems working together, sewage flow from the Venice Pumping Plant can be conveyed to the Hyperion Water Reclamation Plant in Playa del Rey using either or both force mains. The project will also replace backup generators of the Venice Pumping Plant. The project objectives are to increase sewage capacity, create pipeline redundancy and allow for maintenance of the system.

The existing aging and deteriorating 50-year-old sewer is at risk to overflow during peak wet weather conditions. LA Sanitation must protect the public from a potential sewage spill by adding capacity and redundancy.

Project Timing
The project will start in early Spring 2017 and construction completion is expected in Summer 2020. Staging and other prep activity will begin in April.

Expected construction hours are Monday through Saturday from 7:00 a.m. to 7:00 p.m. in most areas but not all. Night work, if required, will be from 7:00 p.m. to 7:00 a.m. with advance notice.
